Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
This DNA sequence encodes the light chain variable region (VL) of murine anti-CD23 (FCERII) monoclonal antibody Cll. The invention provides altered antibodies, such as chimeric or humanised antibodies (see AAZ34747 and AAZ34748), which comprises sufficient of the amino acid sequences of the Cll light and heavy chain complementarity determining regions (see AAY3254-59) to render them capable of binding to the CD23 type II molecule expressed on hematopoletic cells. The antibodies are used to block soluble coll formation in human therapy, for the treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, multiple sclerosis, clubes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative colitis, crohn's disease, sjogren's syndrome, allargies, allargic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, crohn's disease, sjogren's syndrome, allargies, allargic sthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, particularly chronic bronchitis) or diabetes (particularly type I diabetes), and B-cell malignancies (claimed). They are also useful antimical the bilatic and between CD23 and various ligands and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis -

It is used in the construction of a chimeric MAD comprising heavy and light chains having murine V regions and human c regions. The chimeric MADs are more effective than murine MAD above an increased compatibility in humans. The heavy and light chain V-regions are joined by manipulating their respective joining (J) regions, to generate restriction enzyme recognition sites. The chimeric MADs can be used as immunoconjugates, in association with e.g. toxins for HIV treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence encoding light (kappa) chain variable region of murine 2E12 immunoglobulin.

The present sequence encodes the light chain of a catalytic antibody which is capable of degrading cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The antibodies reduce the concentration of cocaine in a subject, and are used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Variable domain; lambda light chain; catalytic antibody; degradation; cocaine; cocaine transition state analogue; TSA; benzolc acid; phenyl cocaine; immunogenic conjugate; reduction; cocaine; treatment; overdose; addiction; ss.

                                                                                                                                                                            The present sequence encodes the light chain of a catalytic antibody which is capable of degrading cocaine. A series of cocaine transition state analogues (TSAS) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for the treatment of an overdose. They are also used for the treatment of an overdose. They are also used for the treatment of an overdose. They are also used for the treatment of an overdose. They are also used for the treatment of an overdose. They are also used for the treatment of an overdose. They are also used for the treatment of an overdose.

A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The antibodies reduce the concentration of cocaine in a subject, and are use particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be

The present sequence encodes the light chain of a catalytic antibody which is capable of degrading occaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The antibodies reduce the concentration of cocaine in a subject, and are use particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 ATCTCCTGCAGGTCTAGTAGGAGTCTCCTATATAGGGATGGGAAGACATACTTGAATTGG 120

C242:II is a monoclonal murine AD of 1gG class produced when culturing in an appropriate medium a hybridoma cell line obtained by fusing spleen cells from a mouse, which has been immunised with a human colonic adenocarcinoma cell line, with the murine myeloma cell line Sp2/0. C242:II when bound to a cell surface antigen is capable of being endocytosed or internalised into cells. See also AAR30448-53.

                                                                                                                                                                                                                                                 AAQ79929 and AAQ79930 encode AAR66757 and AAR66758, the light chains of an animal derived anti-tobacco mosalc virus (TMV) monoclonal antibody. The CDNAs were incorporated into a Ti plasmid vector, which was incorporated into A. tumefaciens. The resultent plant expression vector was used to transform tobacco plants, making them TMV resistant, the plants could also be biofarmed for the produ. of anti-virus antibodies.

                                           This sequence encodes the C242:II kappa chain variable region derived from the C242:II hybridoma. The complementarity determining regions (CDRs) from this sequence may be used in CDR grafting in the production of a cytocoxic conjugate which is targetted to gastrointestinal tumours. These conjugates are useful in reducing tumour size.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Shown is the nucleotide sequence from the end of the oligo-dC tail to the JkJ-Ck junction. The sequence is used in the prodn. of a chimeric antibody mol. comprising two light chains and two heavy chains, each having a constant region (human) and a variable region (murine) having specificity to an antigen bound by murine monoclonal antibody (MAD) B38.1. The chimeric antibodies can be used for any purpose for which the original murine MADs can be used, with the advantage that they are more compatible with the human body. They are esp. used for the diagnosis and treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    84 GGAGTCAGTGGGGATATTGTGATAACCCAGGATGAACTCTCCCAATCCTGTCACTTCTGGA 143

A cDNA clone (AAT43434) codes for the light chain variable region (AAW6209) of mouse monoclonal antibody (Mab) B38-1, and extends from the end of the oligo-dC tail to the J Kappal-C kappa junction. It mouse C kappa region probe. MAD B38-1 (19G1) binds to an antigen that is expressed on the surface of human lung, breast, colon and ovary carcinomas, but not on normal adult tissues. Light chain and heavy chain variable region (see also AA43435-43) sequences can be used with human constant region sequences to express mouse-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        chimeric antibodies in transformed host cells. The antibodies have specificity to human tumour antigens and can be used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mouse-human antibodies - recognise a human tumour antigen, the treatment and diagnosis of human cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

The present sequence encodes the light chain variable region of murine antibody B38.1. The sequence was used to create chimeric mouse-human immunogalboulins which recognise the human tumour antigen bound by antibody INN-1 (produced by hybridoma cell line ATCC HB 9812). The chimeric antibodies also have an antigen-binding site that competitively inhibits the binding of antibody innocent cytolysis of target cells or antibody-dependent calular cytotoxicity to target cells. The chimeric antibodies can be used for therapeutic purposes in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24 CAGGACCTCACCATGAGGTTCTCTGTTCAGTTTCTGGGGGGTGCTTATGTTCTGGATCTCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This cDNA sequence comprises a coding sequence for the light chain variable region VL (see AAW29751) of murine anti-human milk fat globule (HMFG) monoclonal antibody CTMO1. It was isolated from CTMO1 hybridoma cDNA using a light chain constant region probe. CTMO1 VL and VH (see AAT85854) nucleic acids can be used in the construction of recombinant chimeric humanised antibodies and recombinant CDR-grafted humanised antibodies. These may be conjugated with labels or drugs (especially methyltrithio antitumour agents) and used for diagnosis or therapy of human

                                                                                                                                                                                                                                                                                                                                                                                                 The sequences given in AAQ38877-78 encodes the heavy and light chain variable domains of CTMO1 respectively. These sequences were isolated by PCR using the primar sequences given in AAQ38879-80. Examination of the derived amino acid sequences from these sequences revealed considerable homology with other characterised immunoglobulin genes. The murine monoclonal antibody (MAD), CTMO1, was confirmed to be an IGG-kappa antibody. CTMO1 was used in the production of a humanised antibody for in vivo diagnosis and therapy of carcinomas of ovary,

Sequence 55, Application US/09905243

Patent No. US20020065009A1

GENERAL INFORMATION:

APPLICANT: TAYLOr, Alexander H

TITLE OF INVENTION: Monoclonal Antibodies with Reduced

TITLE OF INVENTION: Immunogenicity

FILE REFERENCE: P56770

CURRENT APPLICATION NUMBER: US/09/905,243

CURRENT FILING DATE: 2001-07-16

PRIOR FILING DATE: 1999-04-28

NUMBER OF SEQ ID NOS: 97

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 55

LENGTH: 399
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB 10;

Patent No. US20010046496A1
GENERAL INFORMATION:
APPLICANT: Brettman, Lee R.
APPLICANT: Allison, David Edward
TITLE OF INVENTION: Method of Administering an Antibody
FILE REFERENCE: 1855.2007-001
CURRENT APPLICATION NUMBER: US/09/748,960
CURRENT FILING DATE: 2000-12-27
                                                                                                                                                                                          US-10-158-646-63/C
Sequence 63, Application US/10158646
Sequence 63, Application US/10158646
GENERAL INFORMATION:
APPLICANT: Lasek, Amy K.W.
APPLICANT: Sornasse, Thierry
TITLE OF INVENTION: GENES EXPRESSED IN COLON CANCER
FILE REFERENCE: PA-0030-1 US
CURRENT FILIG DATE: 2002-05-29
PRIOR APPLICATION NUMBER: 60/295,239
PRIOR APPLICATION NUMBER: 60/295,239
PRIOR FILING DATE: 2001-05-31
NUMBER OF SEQ ID NOS: 78

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
